DESCRIPTION

One can never have enough socks, or USB ports. Add some more USB and Ethernet capability to your Raspberry Pi Zero or, really, any kind of tablet or computer with an OTG connector with this **USB 2.0 and Ethernet Hub**!

This handy combo-hub has 3 USB 2.0 ports, and a AX88772A Ethernet transceiver. This chipset is really common and can be used by any Linux, Mac or Windows computer. It's particularly handy for the Raspberry Pi Zero which is tight on USB ports and has no Ethernet out. We did some basic tests and got 11+ MB/s transfer speeds on our Pi Zero. Note that Ethernet draws a lot of power and you'll be looking at 280mA current draw when the hub is plugged in, even if the Ethernet itself isn't being used.

If you need a similar Ethernet hub for a computer without OTG ports, check out this product

Note: Additional USB cables and accessories shown above are not included but we have a wide variety of types and lengths in the store!

TECHNICAL DETAILS

- Dimensions: 97mm x 24mm x 16mm / 3.8" x 0.9" x 0.6"
- Weight: 33g
